Description

For pure python bv_maker modules, there is a special configuration code that make sure that the Python source of each component is in sys.path. It rely on a file python/sitecustomize/bv_maker_pure_python.pth located in the build directory. Each component code is independent and just make sure that its source directory is in this file. But this file is never cleared, therefore directories put here once are here forever. Moreover, directories are added at the end. Thus older directories are first in the list.
